

THE "LONGSTONE" AT MOTTISTONE, ISLE OF WIGHT.

To the Editor of the "Journal of the Anthropological Institute."

DEAR SIR,

There is a short description of the "Longstone" at Mottistone, in the Isle of Wight, in a paper of mine which was published in the *Journal* for August, 1884. I there state that the "Longstone" is an upright stone, having a large flat stone (9 feet \times 4 feet \times 2 feet) lying on the north-east side of it, which I thought might have been slightly moved from its original position. On revisiting the stones last June I found that the flat stone had been shifted about ten feet, and that it now lies to the south-east and not to the north-east of the upright stone. Whether anyone has been digging there, and, if so, whether anything has been found, I do not know; but I think the change in the position of the stone is worth noting on its own account, and I am the more anxious that it should be noted in our *Journal*, since any of its readers going to the stones with my description in their hands might suppose that I had made a mistake; my original sketches, however, clearly show that this is not the case.

I am, dear Sir, yours truly,
A. L. LEWIS.

 ANTHROPOMETRIC STATISTICS FROM AMHERST COLLEGE,
MASS., U.S.A.

In the last Volume (xvii) of this *Journal*, at page 357, will be found a reprint of a brief account of the mean anthropometric results obtained at the gymnasium of Amherst College, Amherst, Mass., U.S.A., by Prof. E. Hitchcock, M.D. His observations refer to so unusual a variety of characteristics, carefully made by the same methods and instruments, and applied to so homogeneous a group, that more detailed accounts would have been very welcome to anthropologists. They would serve, at least, two purposes, the one to show the average variability of each characteristic, and the other to show their interdependence. With a view of determining the first of these objects, I wrote to Dr. Hitchcock, urging the preparation of tables, drawn up in the form by which the distribution of any faculty among the individual members of a group is usually expressed. He responded most cordially to my suggestion, and specially prepared the following tables in manuscript, which are here published, preceded by extracts from his accompanying letter.

FRANCIS GALTON.

"I have at length made out the mean tables of thirteen items, which were suggested as appropriate for study by you.

"By a little error I have not got the same number of observations on each item, but this is because I did not get the maximum and minimum of my whole records for a basis, but inadvertently took those for only one college year, and this unfortunately did not cover every case.

"EDWARD HITCHCOCK."
